

### Square bay window

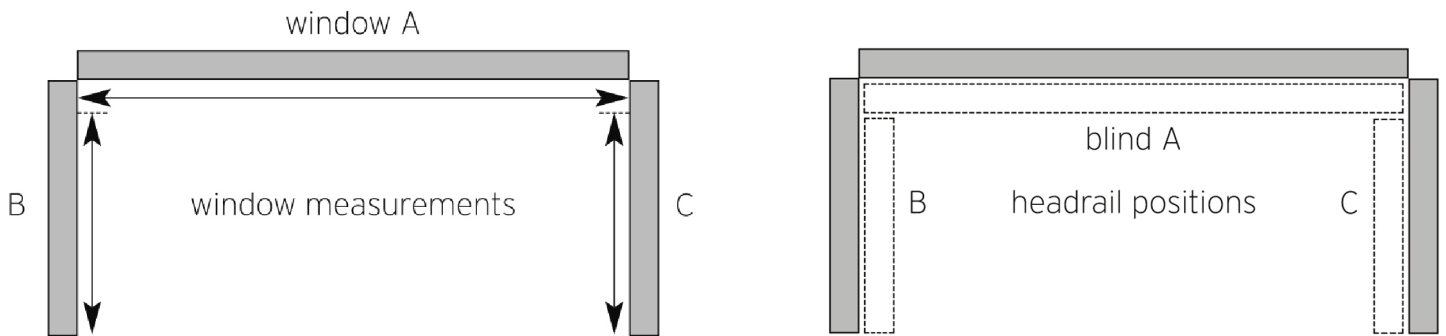

It's easy to measure for a square bay window; there are just 4 easy steps.

### What you'll need

- A tape measure – metal ones are best
- A pencil and paper

### Before you begin

First choose the blind type you would like to fit into your bay window, for example Vertical blinds. Different types of blind should not be mixed. Next read about exact and recess measurements [here](#).

### Step 1

Measure window A first and write this down as a **recess** measurement. Mark where the front edge of the headrail would be when fitted, with a pencil. These vary by blind type (see table below).

You will also need to take into account anything that protrudes from the window, such as handles and add this measurement on. For example when allowing 2cm for handles and choosing a standard Roman with 2.5cm headrail the measurement you'd mark would be 4.5cm from the window ( $2+2.5=4.5\text{cm}$ ).

Blind type	Headrail depth
Roller - 25mm barrel (for widths of blind under 2m)	4.8cm
Roller - 36mm barrel (for widths of blind between 2m and 2.4m)	6.7cm
Roller - 42mm barrel (for widths of blind over 2.4m)	8cm
Roman – standard headrail	2.5cm
Roman – deluxe headrail	4cm
Vertical 89mm	8.5cm
Vertical 127mm	10.5cm
Pleated 20mm	2.1cm
Woodweave	6cm
Venetian 15mm	3.5cm
Venetian 25mm	3.5cm
Venetian 35mm	4.5cm
Venetian 50mm	5.5cm
Wood Venetian 25mm	5cm
Wood Venetian 35mm	5cm
Wood Venetian 50mm	7cm

## Step 2

Measure from the pencil mark you made to represent the front edge of headrail on window 'A', across window 'B' and write this down as an **exact** measurement.

## Step 3

Repeat step 2 for window 'C'. (Note: if you have a 'closed' bay window i.e. you have a wall at the end of windows 'B' and 'C' opposite window 'A' you will need to take down the measurements for windows B and C as **recess** measurements).

## Step 4

Come back to [www.web-blinds.com](http://www.web-blinds.com) and order your blinds!
